Professional Summary

I am a Full Stack Developer and Software Engineering student specializing in **Django**, **PostgreSQL**, and **AI integration**, with experience in building scalable web applications, multi-user systems, and data-driven solutions through hands-on **Data Engineering** work.

A dedicated and hardworking individual with strong problem-solving abilities, focused on developing efficient, intelligent applications and continuously improving technical expertise.

Work Experience

Data Engineering Intern | SkyCode Ltd, Lahore.

08/2025 - 09/2025

- Worked on real-world data analysis using Python libraries (**Pandas**, **NumPy**, **Matplotlib**) for efficient dataset processing
- Strengthened foundations in Data Structures & Algorithms (**DSA**) and Object-Oriented Programming (**OOP**) for optimized solutions.
- Designed and managed SQL databases, focusing on structured data storage and efficient querying
- Developed a **Gemini Clone** using React, JavaScript, Tailwind CSS, and RapidAPI, integrating AI APIs to generate real-time conversational responses and enhance user experience.
- Automated data preprocessing tasks using Python to improve workflow efficiency.

Technical Skills

- **Frontend:** React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
- **Backend:** Python (Django, REST APIs), C# (ASP.NET, WPF), Java, PHP, C++ (OOP & DSA)
- **Databases:** PostgreSQL, MySQL, SQLite, SQL Server
- **AI & NLP:** LLM Fine-tuning, Zero-shot/Few-shot Learning, BLEU/ROUGE Metrics, Data Preprocessing, Machine Learning
- **Tools:** Git, GitHub, Postman (API Testing), Visual Studio, VS Code, IntelliJ IDEA, Draw.io
- **Practices:** Agile (Scrum), RESTful API Design, Role-Based Access Control (RBAC), Problem Solving

Projects And Strengths

Final Year Project — NeatNow (AI-Powered Urban Waste Management System)

- Built a full-stack system with **Citizen** and **Worker** mobile apps using Flutter and an **Admin Web Portal** using React, powered by Django and PostgreSQL
- Designed a multi-role architecture enabling citizens to report waste (image + GPS), workers to manage cleanup tasks, and admins to monitor, assign, and control operations
- Implemented AI-based validation for waste detection and “before & after” image verification to ensure accurate and reliable task completion
- Developed an automated task assignment system using GPS-based proximity with time-bound acceptance, along with real-time notifications and report status tracking (Pending, Assigned, Resolved)
- Created advanced admin features including map-based visualization, heatmaps, analytics dashboards, and gamification (leaderboards, badges, and performance tracking), ensuring a scalable and efficient system

NLP Translation Framework — Urdu to English/Roman

- Built a translation system comparing Fine-tuning vs Zero-shot/Few-shot approaches
- Processed and cleaned 100k+ sentence dataset for training and evaluation
- Evaluated performance using BLEU and ROUGE-N metrics across GPT and Gemini models
- Automated script validation and reporting using Python

Learning Management System (LMS)

- Developed a role-based LMS (Admin, Teacher, Student) using PHP, SQL, HTML, and CSS
- Implemented secure authentication and role-based access for user management, course handling, and progress tracking
- Enabled teachers to upload/manage course content and students to access materials and track their learning progress
- Integrated quiz functionality allowing students to attempt assessments and evaluate their performance
- Designed backend logic for efficient data storage, retrieval, and smooth interaction between frontend and database

Bank Management System (Frontend)

- Built a banking system using Java and OOP principles
- Implemented account operations (create, deposit, withdraw, balance inquiry)
- Used file handling for data storage and transaction logging

Education

Bachelor of Science(BS) in Software Engineering

University of Engineering and Technology, Lahore | 2022 - 2026 | **CGPA: 3.505**
